Miss Malli: store design, wireframes v2

Image-swipe shop, Buy now to WhatsApp, no login, no address on the site

What this document covers

Updated wireframes for the Miss Malli saree store, rebuilt around the current requirements. Pages 2-4 show 17 mobile screens, pages 5-6 explain every customer button, pages 7-8 show the web version, pages 9-10 show the admin panel, and page 11 explains the admin buttons, how it all connects, and what to decide next.

Current requirements

- TikTok-style shop with images only. No reels or videos. Up and down swipes change the saree; sideways swipes change the photo of the same saree. A grid view is one tap away.
- Buy now opens the seller's WhatsApp. The site saves a request (for example #1042) and opens WhatsApp with a short message and a link. The link shows the saree's photo, name and price as a preview card.
- No address or form on the site. The seller collects the delivery address in the chat. The customer's WhatsApp number is already on the incoming message.
- No customer login. Saved sarees, the bag and "My requests" are kept on the customer's phone.
- One request link, two views. The customer opens a status page. The seller, when logged in to admin, opens the same link and sees the admin page.
- Bottom navigation: Home, Shop, Saved, Bag, More. The bar is hidden inside the swipe feed so the photo gets the full screen.
- Admin panel: requests, products and stock, collections, promotions, store info and settings.
- SEO: every product, collection and policy page has its own public URL. Request links are private and kept out of search results.

Main flow

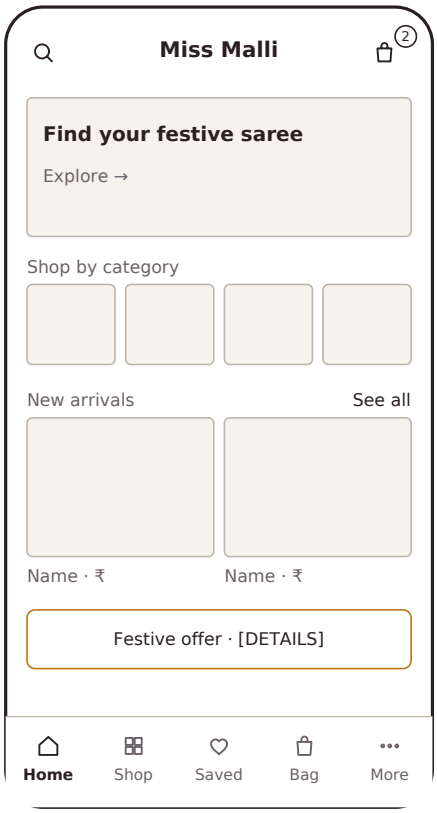

1. Customer swipes the feed and taps Buy now (or sends a bag of several sarees).
2. The server saves the request with the saree, variant and price at that moment.
3. WhatsApp opens on the seller's number with a short message, the request number and the link.
4. The seller replies in chat, collects the address, agrees the price and payment.
5. The seller updates the status in admin; the customer's status page updates at once.

Screen sets

Mobile M1-M17 (browse and buy: 1-9, after Buy now and other tabs: 10-17) · Web W1-W4 · Admin A1-A6

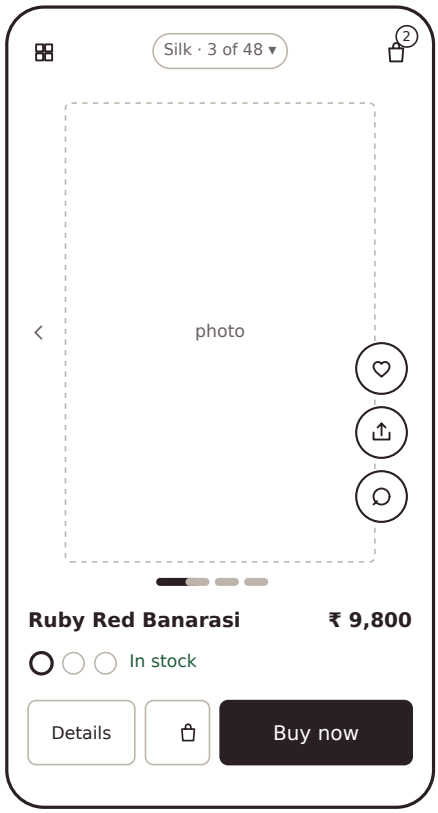

Mobile screens 1-6

Each screen is 9:16. Grey boxes stand in for photos; [BRACKETS] are placeholders.

1. Home

Banner, categories, arrivals, offer

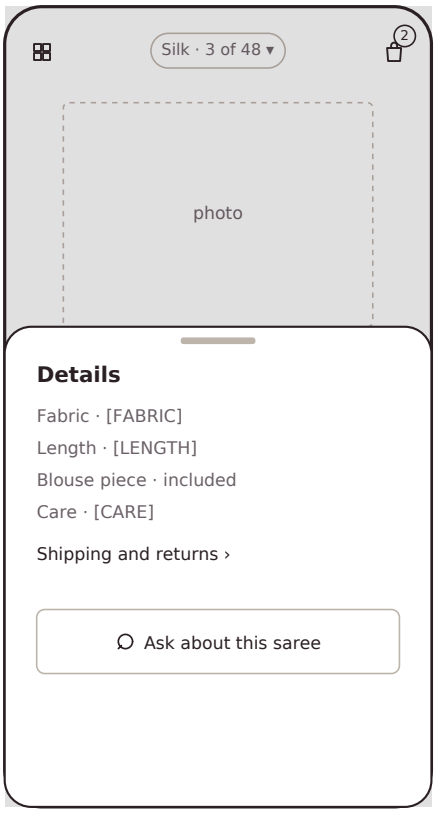

2. Shop feed

Up/down = saree, sideways = photo

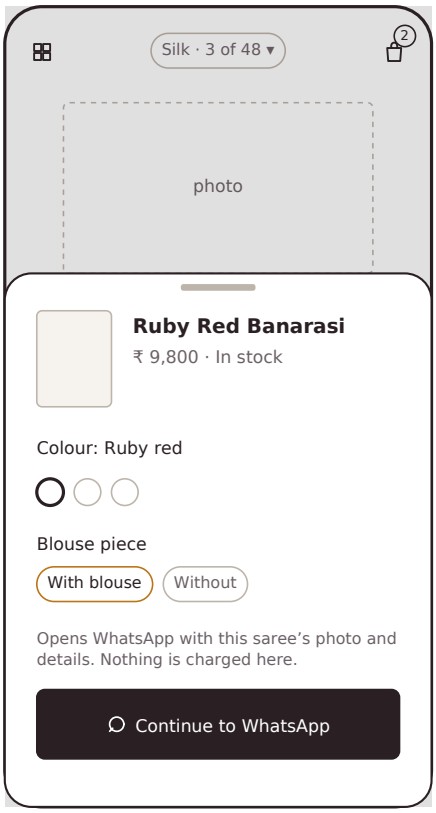

3. First-time hint

Shown once on this phone

4. Details sheet

Tap to open, so swipes never clash

5. Buy now options

Only asks what the seller needs

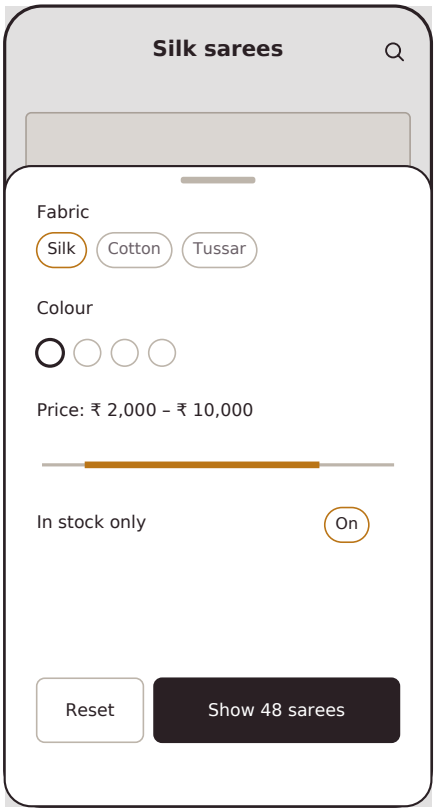

6. Grid view

Scan fast, then jump into the feed

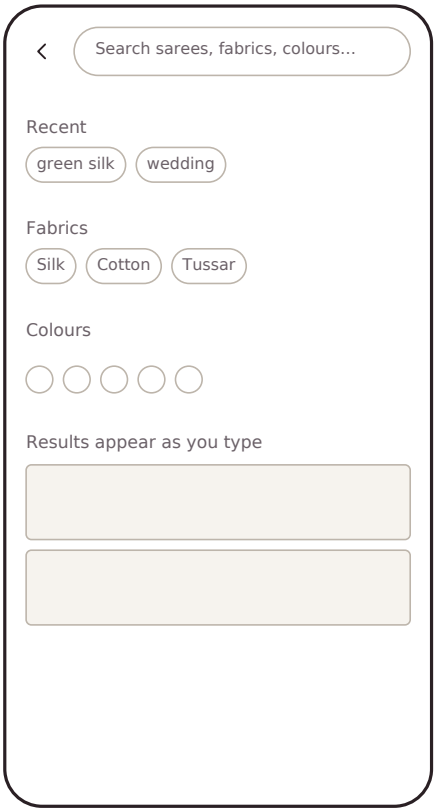

Mobile screens 7-12

Each screen is 9:16. Grey boxes stand in for photos; [BRACKETS] are placeholders.

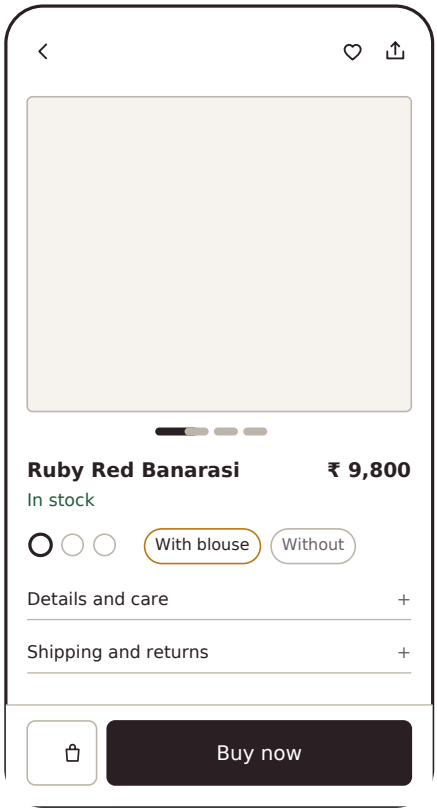

7. Filter sheet

Works in grid and in the feed

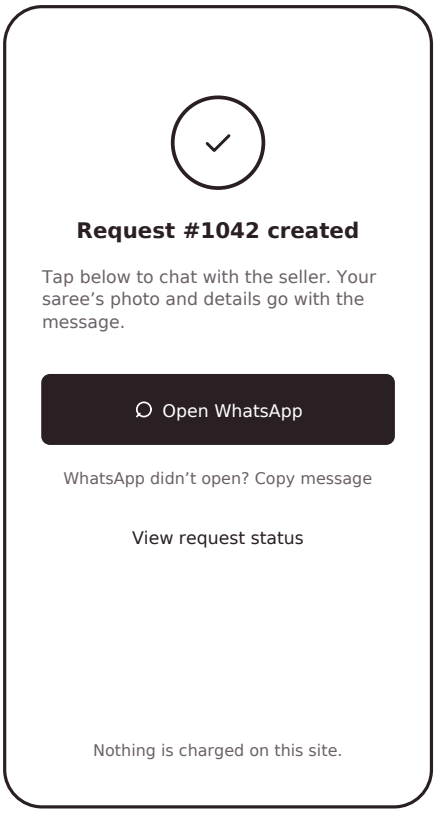

8. Search

Suggestions first, then results

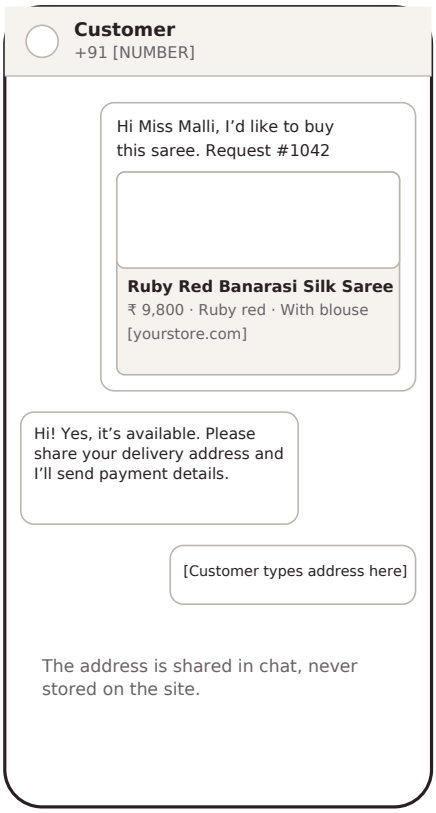

9. Product page

Shared links and Google open here

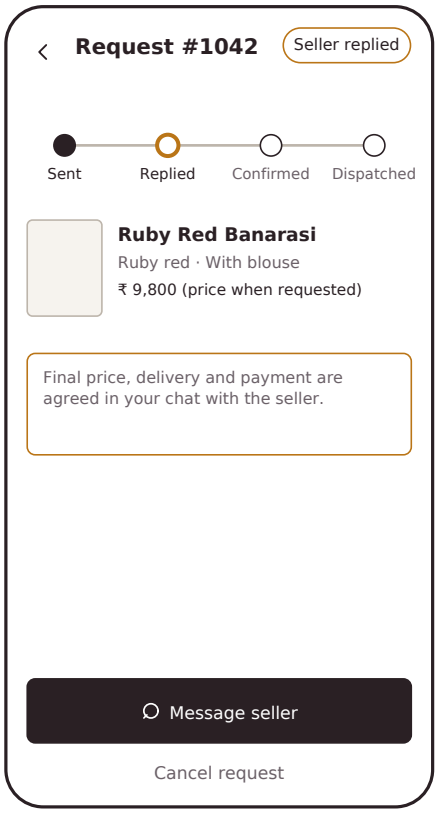

10. Request created

Also the fallback if WhatsApp is blocked

11. What the seller receives

Photo card, price, variant, request number

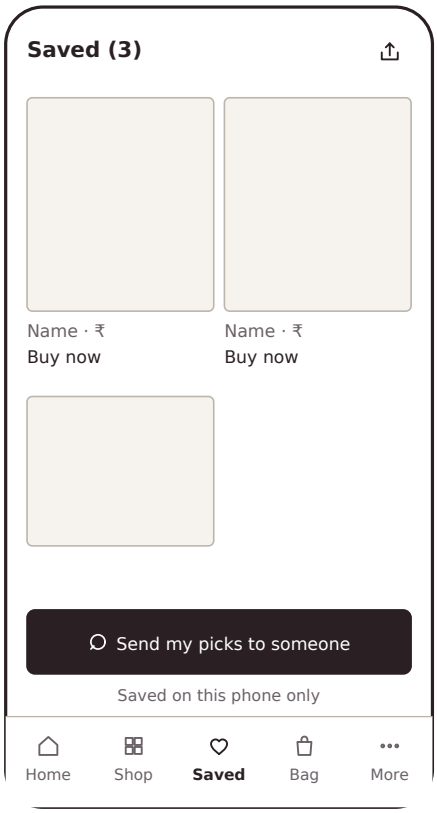

12. Request status page

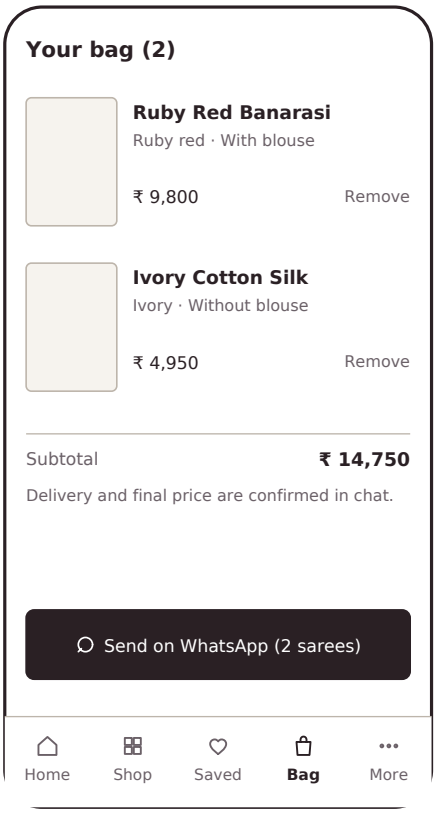

Customer view of the shared link

Mobile screens 13-17

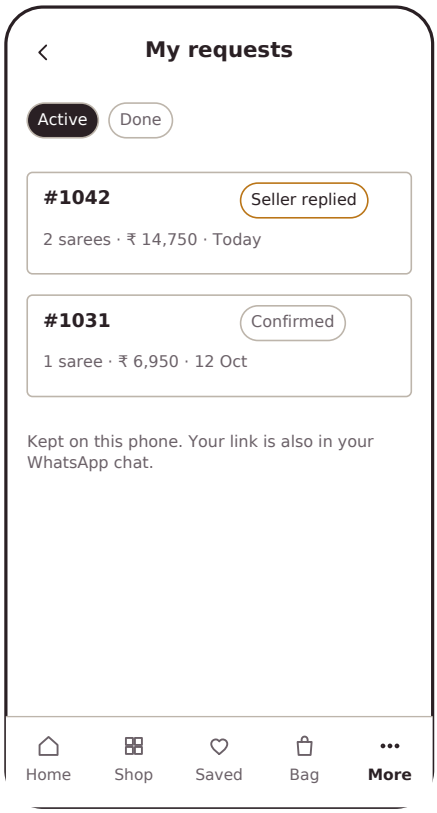

Each screen is 9:16. Grey boxes stand in for photos; [BRACKETS] are placeholders.

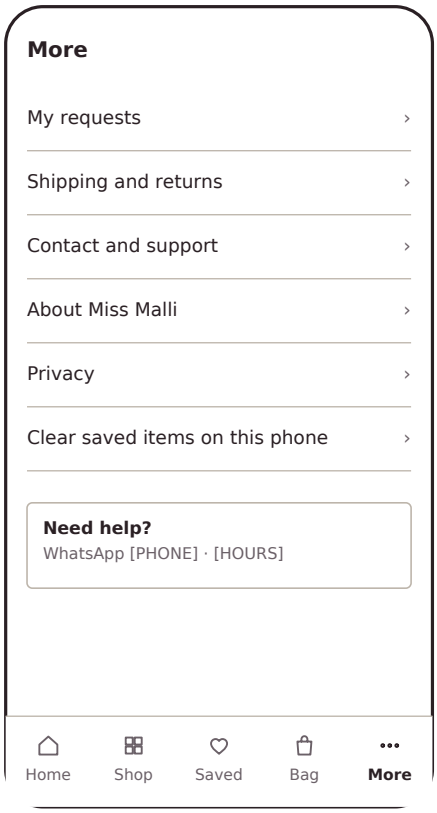

13. Saved
Hearts kept on the device

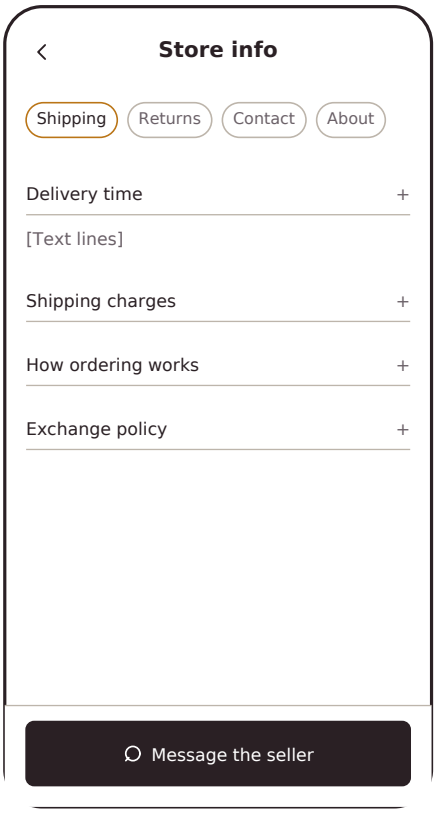

14. Bag
Several sarees, one message

15. My requests
No account, kept on this device

16. More
Store info and device settings

17. Store info
Four tabs, accordion rows

What each customer button does

How the photo gets sent: the WhatsApp message carries a link to the request page, which WhatsApp shows as a preview card with the saree's photo

Screen	Button	What it does
Bottom nav	Home, Shop, Saved, Bag, More	Switches tabs. Shop opens the swipe feed. The bar is hidden inside the feed so the photo gets the full screen.
Feed (2)	Grid icon (top left)	Switches to the grid view of the same collection.
	"Silk · 3 of 48"	Opens a collection picker (Silk, Cotton, Festive and so on).
	Bag icon with count	Opens the bag.
	Heart	Saves the saree on this phone.
	Share	Sends the saree's page link, so the photo and price appear in the chat.
	Chat icon	Starts a WhatsApp question about this saree. It creates no request.
	Colour dots	Changes the colour and the photo.
	Details	Opens the details sheet (fabric, care, shipping).
	Bag icon button	Adds the saree to the bag.
	Buy now	Opens the options sheet if the saree has colour or blouse choices. Otherwise it creates the request and opens WhatsApp.
Details sheet (4)	Ask about this saree	Same as the chat icon.
Options sheet (5)	Continue to WhatsApp	Saves request #1042 and opens WhatsApp with the message and link.
Grid (6)	Filter, Sort, In stock	Opens filters, changes sorting, or hides sold-out pieces.

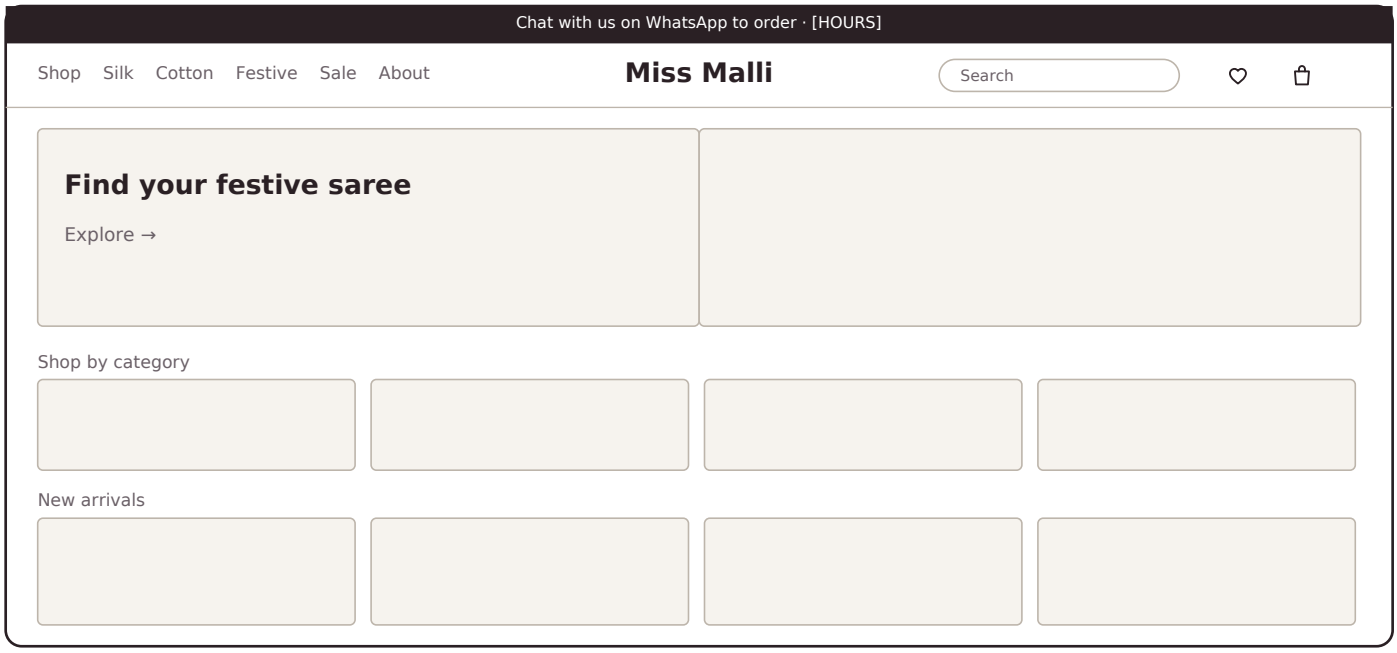

What each customer button does (continued)

Screen	Button	What it does
	A saree card	Opens that saree in the feed.
Request created (10)	Open WhatsApp	Retries opening the chat.
	Copy message	Copies the message so the customer can paste it if WhatsApp does not open.
Status page (12)	Message seller	Reopens the chat.
	Cancel request	Marks the request Cancelled and tells the seller.
Saved (13)	Buy now (under a card)	Same as Buy now in the feed.
	Send my picks	Shares one link showing the whole saved list.
Bag (14)	Send on WhatsApp	Saves one request with all the sarees and opens WhatsApp.
	Remove	Takes a saree out of the bag.
More (16)	Clear saved items	Wipes the bag, saved list and requests stored on this phone.

For a bag with several sarees, the preview card shows the first saree and the request page shows all of them. The seller's chat then holds the request number, the details and the customer's own WhatsApp number.

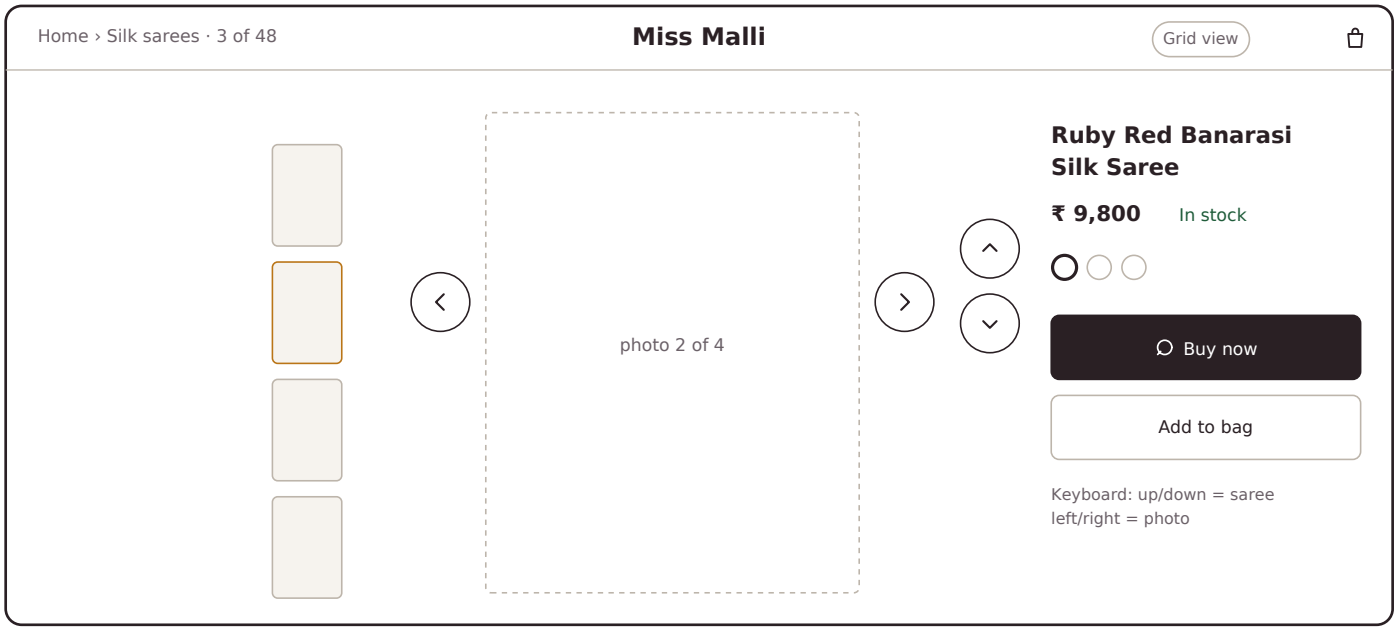

Web version

Same flow as mobile, laid out for a wide screen.

W1. Home

Announcement bar, banner, categories, new arrivals.

W2. Shop feed on desktop

The swipe feed stays mobile-first. On desktop it uses arrow buttons, a thumbnail strip and keyboard arrows.

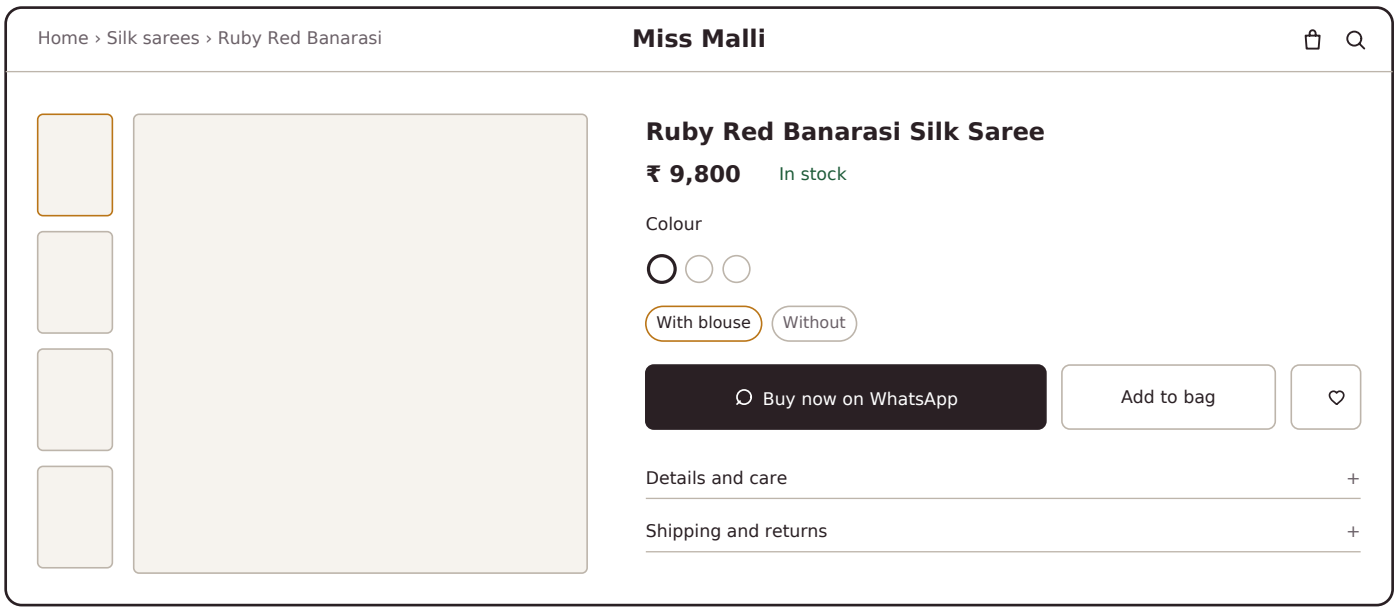

Web version

Same flow as mobile, laid out for a wide screen.

W3. Shop grid with filters

Filters sit in a side column. "Feed view" switches to the one-saree-at-a-time view.

W4. Product page

The public page Google indexes. Buy now opens WhatsApp with the saree's photo card and details.

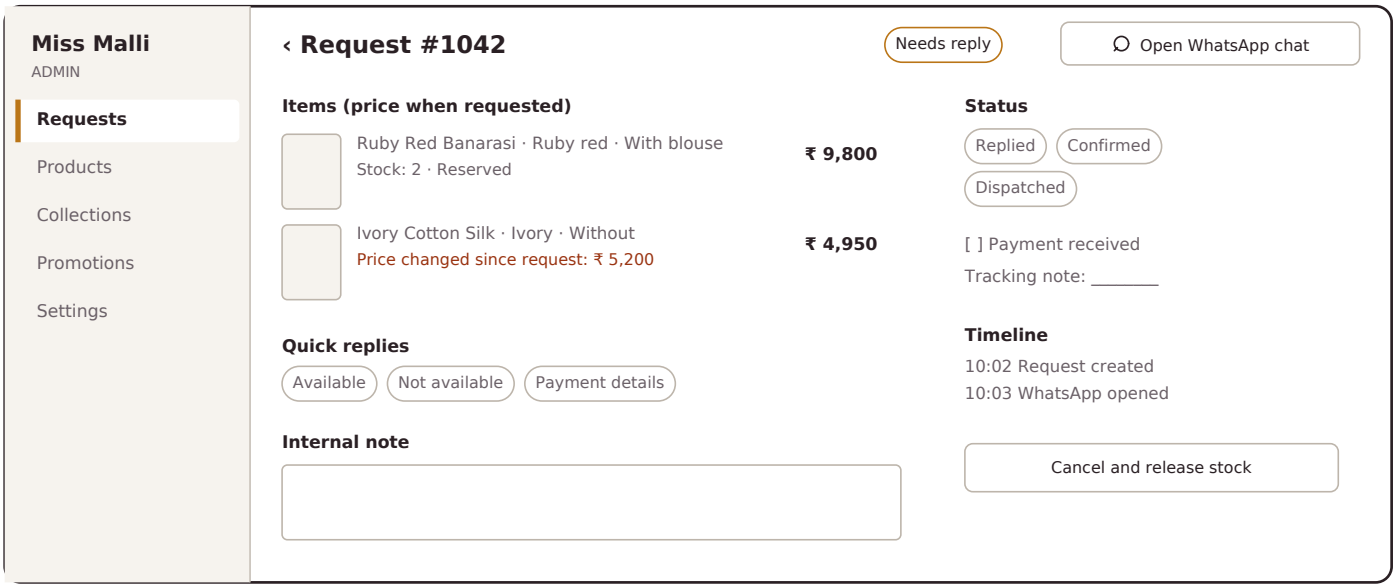

Admin panel

Desktop screens for the seller. Login is email plus a strong password and a code.

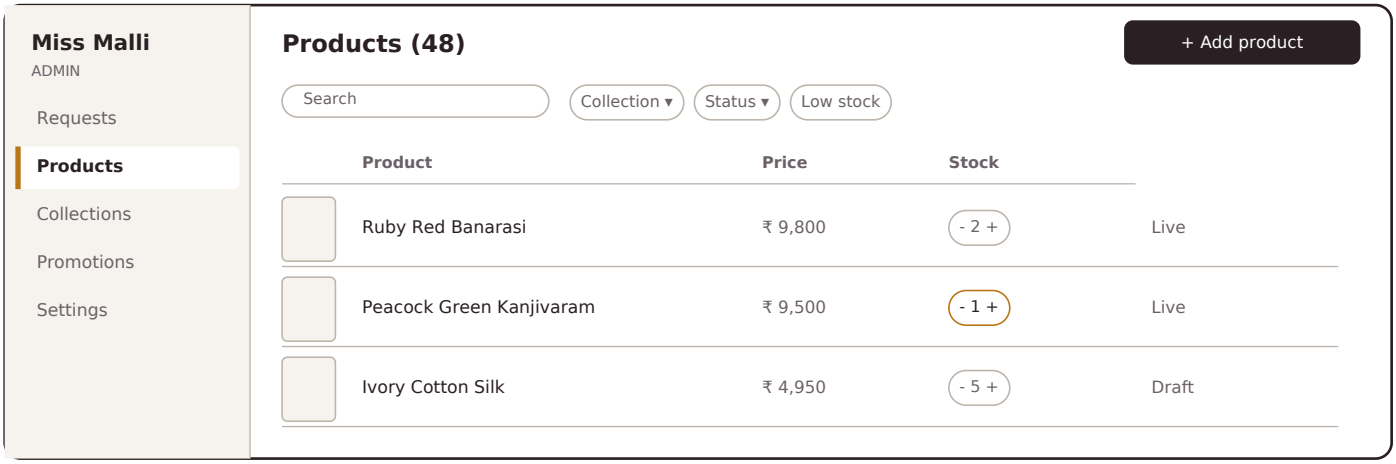

A1. Requests

The seller's inbox. Needs reply shows first; old unanswered requests expire on their own.

A2. Request detail

The same link the customer opens, with the admin controls. Price is locked at request time and a change is flagged.

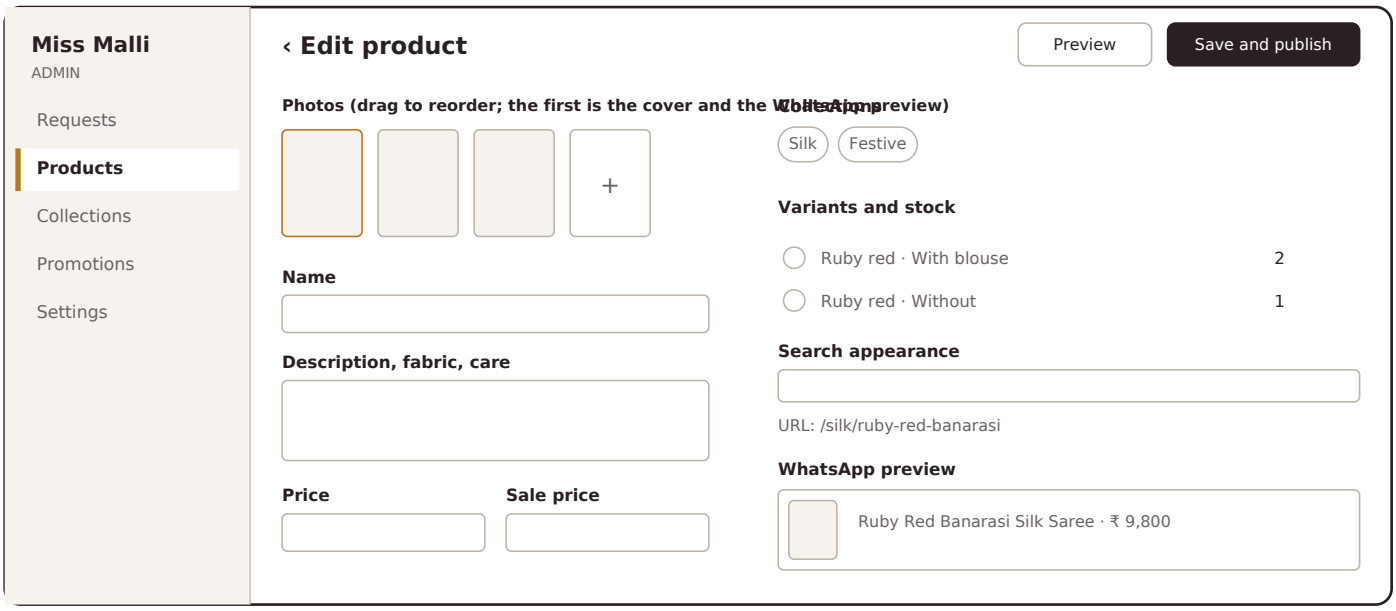

A3. Products and stock

Stock can be changed straight from the list.

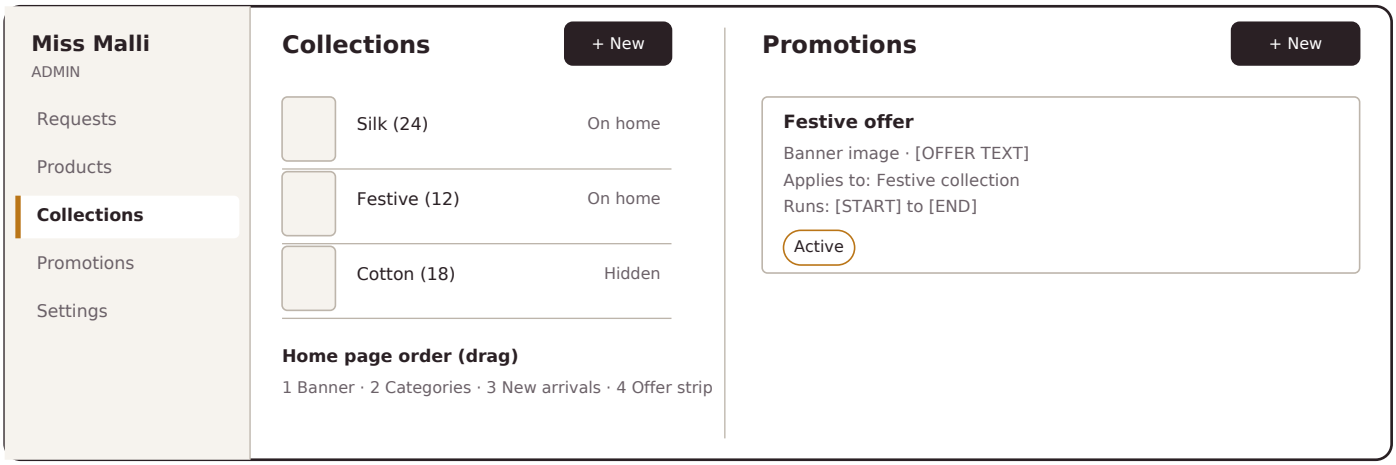

Admin panel

Desktop screens for the seller. Login is email plus a strong password and a code.

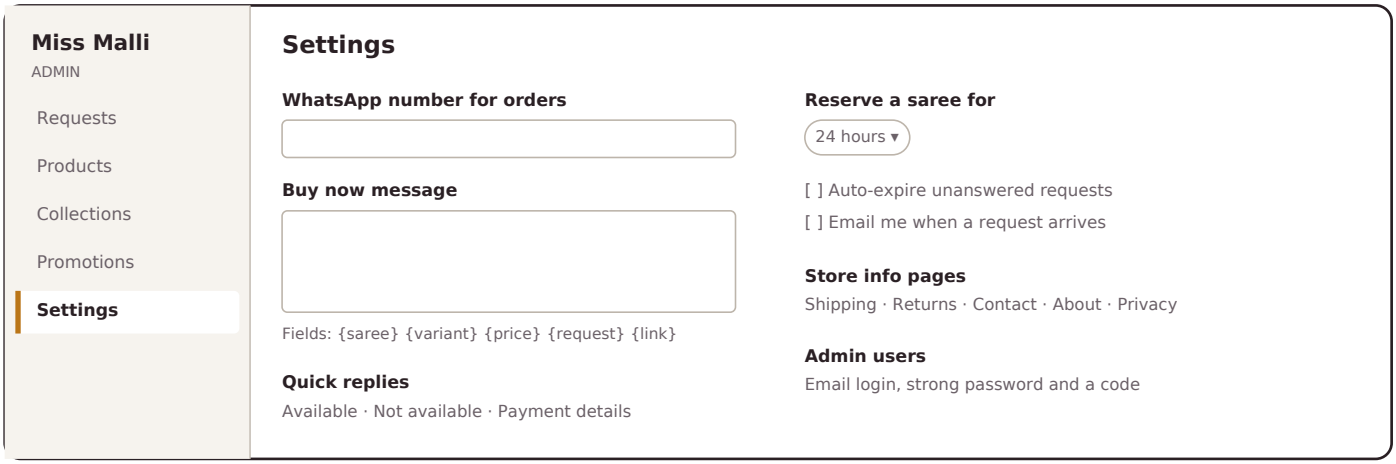

A4. Product editor

The first photo is the cover and the image WhatsApp shows in the preview card.

A5. Collections, promotions and home layout

Controls what appears on Home and which sarees carry an offer, with dates.

A6. Settings

WhatsApp number, message wording, hold time and store info pages.

What each admin button does

Screen	Button	What it does
A1 Requests	Filter chips	Shows Needs reply, Replied, Confirmed, Dispatched or Closed.
	Open	Opens the request page.
A2 Request detail	Open WhatsApp chat	Opens WhatsApp to the customer using the number on their incoming message.
	Quick replies	Fills in a ready reply (available, not available, payment details) with the correct totals.
	Status buttons	Replied, Confirmed, Dispatched. The customer's status page updates at once.
	Payment received	A tick for the seller's own record. No payment happens on the site.
	Cancel and release stock	Closes the request and makes the saree available again.
A3 Products	- / +	Changes stock directly in the list.
	+ Add product	Opens the editor.
A4 Editor	Photos	The first photo is the cover and also the image WhatsApp shows in the preview card.
	Variants and stock	Colour and blouse options, each with its own stock count.
	Preview	Shows how the page and the WhatsApp card will look.
	Save and publish	Puts the saree live.
A5 Collections	Collections and promotions	Controls what appears on Home and which sarees get an offer banner, with dates.
A6 Settings	Message template	Controls the wording of the Buy now message.
	Reserve time	How long a saree is held while a request is open.

How it all connects

1. Customer taps Buy now. The site saves request #1042 with the item, variant and price at that moment.
2. WhatsApp opens with a short message and the request link. The link shows as a preview card with the saree's photo, name and price.
3. The seller replies in chat and collects the delivery address there. Nothing like that is stored on the site.
4. One link shows two views. The customer sees the status page. The seller, logged in to admin, sees the admin page.
5. Stock is held while a request is open and released when it is cancelled or expires.

Safeguards that matter without login

- The price shown is the one saved at request time, so editing the WhatsApp text changes nothing.
- The request link is long and random, shows only the saree details, and is kept out of Google search results.
- Add a bot check and a limit on how many requests one device can make per hour.
- A request that is created but never sent in WhatsApp stays in the list as unanswered; auto-expiry cleans it up.

Settle with the client

- The preview card. Test it on a real phone early. It only appears when the link is public and the product photo is set as the page's preview image.
- How long to hold a saree, and whether to hold it at all before the seller replies.
- Admin alerts. Without the WhatsApp API, an email alert is the practical option.
- The colour palette. Everything here is neutral with amber as a placeholder accent.

Next step

Once the palette is picked, build the mobile flow (screens 1, 2, 5, 10, 12 and 14) as full designs, followed by the admin screens.
